

550 Inverted Cone Antenna

The Model 550 is an excellent choice for omni-directional HF communications, where both ground wave and skywave coverage are required.

The 550's large diameter/height ratio provides excellent VSWR and pattern performance over a very wide frequency range—up to 20:1 for the Model 550-6 that operates at full efficiency down to 1.6 MHz—making it one of the few broadband antennas optimized for the lower maritime bands.

The true wideband capability of the 550 is achieved with full radiation efficiency. The antenna uses no tuners, special coupling units, terminations, resistors or lossy elements to achieve its high bandwidth, nor does it use any techniques or devices to couple RF energy to the ground, a technique sometimes used to increase bandwidth at the expense of efficiency.

Combine ground waves and skywaves for omnidirectional HF.

The 550 is the simplest and safest antenna to erect in its class. The structure is fully stable during the rigging sequence, without the need for temporary guys. The antenna does not use a rigid ring to maintain the shape of the cone, which can be difficult to install safely. Once erected, the Model 550 has outstanding structural rigidity, without troublesome deflections and mechanical oscillations that occur in antennas using rigid rings.

As with all TCI antennas, the Model 550 employs high-quality, exhaustively tested components and materials. All radiators and catenaries are Alumoweld, a wire composed of a high-strength steel core and a highly conductive, corrosion-resistant coating of aluminum. All feedline and radiator insulators are made of high-strength glazed alumina, a material with an extremely low loss tangent, which is virtually impervious to the effects of UV and salt spray. Neither fiberglass nor other synthetic materials are used anywhere in the

antenna. A working life of 25 years or more is standard with the Model 550.

KEY FEATURES

- › 1.6–32 MHz – covers entire maritime mobile service
- › Single tower
- › 2.0:1 VSWR maximum anywhere in band
- › Fully efficient
- › Rugged and safe to erect

550 Inverted Cone Antenna

Model 550 Specifications	
Polarization	Vertical
Radiation Patterns	Elevation: See patterns at right Azimuth: Circular with ± 0.75 dB
Input Impedance	50 Ohms
VSWR	2.0:1 or less in specified frequency range
Environmental Performance	Designed in accordance with EIA Specification RS-222C for loading of 190 km/h (116 mi/h) wind with no ice (higher environment models available)
Power Capability	See "Power and Impedance Data" below. No matching unit is needed.

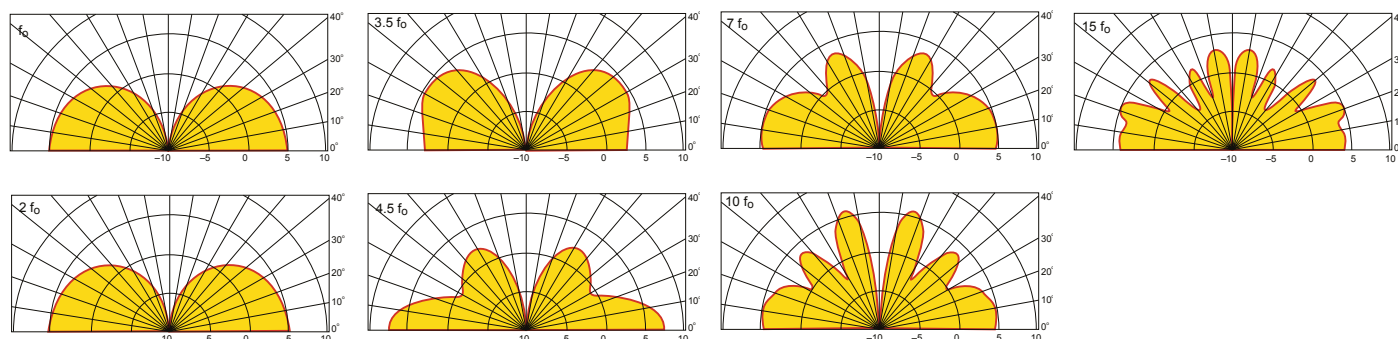

Power and Impedance Data		
Model Number f=frequency (see frequency and size data)	Power Handling Capability	Connector
550-f-02	Receive	Type N Female
550-f-03	10 kW Avg / 50 kW PEP	1-5/8" EIA
550-f-04	25 kW Avg / 50 kW PEP	3-1/8" EIA
550-f-05	5 kW Avg / 10 kW PEP	7/8" EIA
550-f-06	1 kW Avg / 2 kW PEP	Type N female

Frequency and Size Data					
Model Number p=power (see below)	Frequency Range	Height		Diameter*	
		ft	m	ft	m
550-1-p	1.9-32 MHz	122.0	37.2	250.0	76.2
550-2-p	2.3-32 MHz	102.0	31.0	210.0	64.0
550-3-p	2.8-32 MHz	82.0	25.0	176.6	53.9
550-4-p	3.8-32 MHz	62.0	18.9	133.5	40.7
550-5-p	5.5-32 MHz	42.0	12.8	92.4	28.2
550-6-p	1.6-32 MHz	142.0	43.3	294.0	89.6

* Measured from extreme guy points

Optional Equipment
• Lighting kit (may increase maximum VSWR to 2.2:1)
• Lighting arrestor/static drain kit (may not be adequate for transmitter protection circuits)
• DC ground choke for transmitter protection circuits (may increase maximum VSWR to 2.5:1)

> ELEVATION PLANE PATTERNS Gain in dBi over perfect earth
